The Engine Company Operations course is designed for firefighters who respond as members of an engine company. The program offers firefighters and officers an opportunity to either sharpen their current skills or learn new and efficient skills for the all-important task of getting water on the fire. Truck Company Operations is an immersive hands-on program that includes opportunities to select and evaluate a variety of differing hose loads and line advancement techniques.

Engine Company Operations Instructors represent a variety of departments. This brings differing geographical solutions to the table for a variety of fireground evolutions.
