Program of Instruction
Course Syllabus

Course Title: Statewide WMD Response: Hazardous Materials Operations

Course Duration: 40 hours

Program: Hazardous Materials Program

Level of Training: Performance-Defensive (OSHA Operations)

Course Prerequisites: Statewide WMD Response: Hazardous Materials Awareness

Course Description: The Statewide WMD Response: Hazardous Materials Operations course provides to those who are or will be operating as a member of a fire department, law enforcement agency, EMS agency, emergency management agency, or other first responder agency, the basic skills needed to evaluate and work defensively at an incident involving the release of hazardous materials. The objectives of the course are to teach participants: basic hazards and risk-assessment techniques for Hazmat and CBRNE environments; selecting and using proper personal protective equipment provided to the first responder at the Operations level; performing basic control, containment and/or confinement operations within the capabilities of the resources and personal protective equipment available; an understanding of the types of CBRNE and WMD events that may be presented to the first responder; and an understanding of the relevant standard operating guidelines and termination procedures.
Course Content:

Module: 1
Title: Laws, Regulations, & Standards

Terminal Learning Objective:
At the conclusion of this module, the student will apply the laws, regulations and standards to examples of WMD and hazardous materials incidents.

Module: 2
Title: Response Components

Terminal Learning Objective:
At the conclusion of this module, the student will determine the strategic and tactical objectives to be completed at all hazardous materials incidents.

Module: 3
Title: Chemical and Physical Properties

Terminal Learning Objective:
At the conclusion of this module, the student will predict how the chemical and physical properties of a product will affect response to a hazardous materials incident.

Module: 4
Title: Health and Safety

Terminal Learning Objective:
At the conclusion of this module, the student will relate health hazards with an associated material and its container.

Module: 5
Title: Intelligence & Resources

Terminal Learning Objective:
At the conclusion of this module, the student will interpret intelligence and resource information as it relates to the hazardous materials response.
Module: 6
Title: Personal Protective Equipment

Terminal Learning Objective:
At the conclusion of this module, the student will categorize the different types of personal protective equipment (PPE) by their characteristics and be able to don, doff, and work in each type of PPE available to the Operations trained responder.

Module: 7
Title: Recognition and Identification of Transportation Containers

Terminal Learning Objective:
At the conclusion of this module, the student will recognize different types of transportation containers and markings and determine the hazards associated with the materials transported or stored within the container. (NFPA 472 5.2.1) (OSFM 23-4.3)

Module: 8
Title: Fixed Facilities

Terminal Learning Objective:
At the conclusion of this module, the student will recognize different types of transportation containers and markings and determine the hazards associated with the materials transported or stored within the container. (NFPA 472 5.2.1) (OSFM 23-4.3)

Practical – PPE, Placards & Labels – See Drill Sheet for Specifics

Module: 9
Title: Terrorist and Other Criminal Activities

Terminal Learning Objective:
At the conclusion of this module, the student will classify terrorist incidents into the five basic categories of Chemical, Biological, Radiological, Nuclear, and Explosive.
Module:  10
Title:  Incident Analysis

Terminal Learning Objective:
At the conclusion of this module, the student will describe procedures for predicting the release of a material from its container and determine the best protective actions for affected exposures.

Module:  11
Title:  Monitoring

Terminal Learning Objective:
At the conclusion of this module, the student will explain the different types of monitors and techniques available and demonstrate effectively monitoring an atmosphere for an unknown material.

Practical – Monitoring – See Drill Sheet for Specifics

Module:  12
Title:  Product Control

Terminal Learning Objective:
At the conclusion of this module, the student will be able to describe the various defensive options available to the Operations trained responder and demonstrate confining a hazardous material to a certain area.

Module:  13
Title:  Foam

Terminal Learning Objective:
At the conclusion of this module, the student will be able to describe the various types of foam and application techniques available and demonstrate using foam to suppress vapors.

Practical – Foam & Product Control – See Drill Sheet for Specifics
Module: 14
Title: Termination

Terminal Learning Objective:
At the conclusion of this module, the student will explain procedures to be followed at the termination of a hazardous materials incident. (NFPA 472 5.6)

Module: 15
Title: Decontamination

Terminal Learning Objective:
At the conclusion of this module, the student will describe the different types of decontamination and demonstrate proper selection, set-up, operation, and tear down of a decontamination line.

Practical – Decontamination – See Drill Sheet for Specifics

Module: 16
Title: Incident Management

Terminal Learning Objective:
At the conclusion of this module, the student will describe the different roles in the incident management system (IMS) and what role the first responder will play in a hazardous material incident.

Tabletop Incident – See Drill Sheet for Specifics

Module: 17
Title: Unknown Hazard Analysis

Terminal Learning Objective:
At the conclusion of this module, the student will identify ways to obtain information about a product that is not known.

Final Incident – See Drill Sheet for Specifics
**Evaluation Strategy:**
Written homework and practical skills testing are completed throughout the course. A written test and final practical incident are conducted at the completion of the course. In addition, several simulated evolutions and table-top scenarios are used throughout the course.
